

Geotextiles

Engineered for durability and performance, our line of Geotextiles provides essential soil management solutions for marine and civil construction. Whether your project requires the high-tensile reinforcement of Woven fabrics or the superior filtration and cushioning properties of Non-Woven polypropylene for drainage and road repair, we have the material to match the spec. All our fabrics are designed for long-term resistance to UV degradation, rot, and biological breakdown.

CUSTOM SOURCING AVAILABLE

While the products listed below represent our most common DOT-approved inventory, we are a full-service supplier. If your project requires a specific weight, permeability, or material spec not listed here, call us. We can source exactly what you need. Please contact US for any other requirements for your project.

Applications:

- Rip Rap
